

Data Processing Addendum And Cross-Border Transfer Terms

Apex DataWorks Ltd. processor terms for HR, CRM, marketing, support, and analytics data

Synthetic legal-style test document for agent evaluation. Not legal advice. No real parties.

Processing Roles

Customer acts as controller for personal data submitted to the services. Apex DataWorks Ltd. acts as processor except for account administration, billing, security monitoring, sanctions screening, and legal compliance records where it acts as independent controller.

Categories Of Data

- Employee data: names, work email, department, manager, role, location, approval authority, support ticket text, access logs, and training completion records.
- Customer and prospect data: names, email addresses, phone numbers, CRM opportunity notes, campaign membership, website interaction events, consent status, and customer support history.
- Supplier data: vendor contacts, tax identifiers, onboarding questionnaires, insurance certificates, audit findings, beneficial ownership declarations, and contract metadata.
- Sensitive data is not expected, but free-text ticket fields may accidentally include health, financial, or government identifier data. Provider must apply detection, redaction, and escalation procedures.

Processor Obligations

- Provider shall process personal data only on documented instructions and shall immediately notify Customer if an instruction appears unlawful.
- Provider shall ensure personnel confidentiality, minimum necessary access, background checks for privileged operators, and annual privacy training.
- Provider shall support data subject requests by locating, exporting, deleting, or restricting personal data within 15 business days of a verified request.

Subprocessors

Provider may use the subprocessors listed in Schedule 2 for hosting, logging, support, backup, and email delivery. Provider must provide 30 days prior notice before adding or replacing a material subprocessor. Customer may object on reasonable privacy, security, or regulatory grounds.

Schedule 2: Cloud hosting - Ireland and United States - infrastructure operations - encrypted storage and compute.

Schedule 2: Support desk - European Union - customer support tickets - access by named support staff only.

Schedule 2: Email delivery - United States - transactional notifications - no message body analytics.

Cross-Border Transfers

For transfers from jurisdictions requiring safeguards, the parties incorporate the applicable standard contractual clauses, UK addendum where applicable, and transfer impact assessment controls. Provider shall not transfer regulated data to a restricted jurisdiction without prior written approval.

Security Measures

- Encryption at rest and in transit, vulnerability management, malware protection, centralized logging, production change control, and incident response playbooks are mandatory.
- Privileged access requires ticketed approval, time-bound elevation, MFA, session logging, and manager review.

Deletion And Return

Upon termination or written instruction, Provider shall return data in JSON, CSV, and native attachment format, then delete active systems within 45 days and backups within 180 days. Provider shall certify deletion except for records retained by law.

AI And Automated Processing

Customer personal data shall not be used for model training, fine-tuning, benchmark generation, or service improvement without a separate signed opt-in. Automated summaries remain assistive and may not be treated as final employment, credit, healthcare, or legal determinations.

Reference Basis For Synthetic Fixture

This fixture is original synthetic text. It uses public legal, regulatory, security, cloud, export-control, and AI governance sources only as structural reference points. It is not legal advice and is not a copy of any source template.

Schedule A - Commercial And Governance Terms

This schedule converts the business request into a production-ready contract package for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions. The parties acknowledge the primary regulated focus as controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support.

1. Definitions And Interpretation

For Data Processing Addendum, Apex DataWorks Ltd. shall define controlled terms, service boundary, covered affiliates, data classes, evidence artifacts, and approval gates. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for definitions and interpretation.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 01 | Area: Definitions And Interpretation | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

2. Order Of Precedence

For Data Processing Addendum, Apex DataWorks Ltd. shall resolve conflicts between the order form, schedules, security annex, DPA, support policies, and statements of work. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for order of precedence.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 02 | Area: Order Of Precedence | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

3. Statement Of Work Controls

For Data Processing Addendum, Apex DataWorks Ltd. shall require every work package to identify scope, owners, data, systems, locations, subcontractors, acceptance tests, and blockers. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for statement of work controls.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 03 | Area: Statement Of Work Controls | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

4. Governance Board

For Data Processing Addendum, Apex DataWorks Ltd. shall establish operational, legal, security, privacy, finance, and compliance reviewers with documented decision rights. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for governance board.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 04 | Area: Governance Board | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

5. Onboarding Gate

For Data Processing Addendum, Apex DataWorks Ltd. shall block production use until risk classification, architecture review, data owner approval, security review, and contract signoff are complete. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for onboarding gate.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 05 | Area: Onboarding Gate | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

6. Service Description

For Data Processing Addendum, Apex DataWorks Ltd. shall state what the provider may do, what it may not do, and which activities need a separate change order. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for service description.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 06 | Area: Service Description | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

7. Customer Responsibilities

For Data Processing Addendum, Apex DataWorks Ltd. shall identify required approvals, access provisioning, data-quality responsibilities, and evidence response timelines. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for customer responsibilities.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 07 | Area: Customer Responsibilities | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

8. Provider Responsibilities

For Data Processing Addendum, Apex DataWorks Ltd. shall require professional care, trained personnel, documented controls, subcontractor oversight, and audit cooperation. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for provider responsibilities.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 08 | Area: Provider Responsibilities | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

9. Regulatory Change

For Data Processing Addendum, Apex DataWorks Ltd. shall require impact assessment, control updates, pricing discussion, and implementation plan when law or regulator guidance changes. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for regulatory change.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 09 | Area: Regulatory Change | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

10. Policies And Standards

For Data Processing Addendum, Apex DataWorks Ltd. shall bind the provider to security, privacy, AI, procurement, continuity, records, and acceptable-use policies supplied by customer. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for policies and standards.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 10 | Area: Policies And Standards | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

11. Personnel And Background Screening

For Data Processing Addendum, Apex DataWorks Ltd. shall require appropriate screening, role-based training, confidentiality obligations, and access removal at exit. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for personnel and background screening.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 11 | Area: Personnel And Background Screening | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

12. Conflicts Of Interest

For Data Processing Addendum, Apex DataWorks Ltd. shall require disclosure of conflicting customers, incentives, related-party arrangements, and independence impairments. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for conflicts of interest.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 12 | Area: Conflicts Of Interest | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

13. Subcontracting

For Data Processing Addendum, Apex DataWorks Ltd. shall require approval for material subcontractors, flow-down clauses, evidence rights, and termination support. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for subcontracting.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 13 | Area: Subcontracting | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

14. Change Control

For Data Processing Addendum, Apex DataWorks Ltd. shall require risk assessment before changing scope, location, subprocessors, integrations, data classes, AI use, or access model. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for change control.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 14 | Area: Change Control | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

15. Fees And Invoicing Controls

For Data Processing Addendum, Apex DataWorks Ltd. shall align billing events to accepted deliverables, usage reports, rate cards, credits, and disputed invoice procedures. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for fees and invoicing controls.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 15 | Area: Fees And Invoicing Controls | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

16. Service Levels

For Data Processing Addendum, Apex DataWorks Ltd. shall define uptime, response, restoration, data delivery, support, reporting, and incident communication measures. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for service levels.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 16 | Area: Service Levels | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

17. Service Credits

For Data Processing Addendum, Apex DataWorks Ltd. shall state credits do not replace corrective actions, regulatory duties, or termination rights for chronic failure. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for service credits.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 17 | Area: Service Credits | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

18. Acceptance Testing

For Data Processing Addendum, Apex DataWorks Ltd. shall require functional, security, privacy, continuity, integration, and reporting tests before production acceptance. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for acceptance testing.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 18 | Area: Acceptance Testing | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

19. Documentation

For Data Processing Addendum, Apex DataWorks Ltd. shall require architecture diagrams, runbooks, integration inventory, data maps, control matrix, and evidence pack maintenance. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for documentation.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 19 | Area: Documentation | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

20. Records Retention

For Data Processing Addendum, Apex DataWorks Ltd. shall preserve approvals, logs, exports, support records, change records, audit evidence, and decision files for defined periods. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for records retention.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 20 | Area: Records Retention | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

21. Audit Rights

For Data Processing Addendum, Apex DataWorks Ltd. shall permit questionnaire, evidence review, independent assurance report, interview, remediation tracking, and targeted audit. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for audit rights.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 21 | Area: Audit Rights | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

22. Incident Management

For Data Processing Addendum, Apex DataWorks Ltd. shall define security, privacy, continuity, physical, export, payment, and data-quality incidents with severity levels. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for incident management.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 22 | Area: Incident Management | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

23. Notification

For Data Processing Addendum, Apex DataWorks Ltd. shall require prompt notices, factual updates, root cause, containment, legal hold, communications approval, and corrective plan. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for notification.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 23 | Area: Notification | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

24. Remediation

For Data Processing Addendum, Apex DataWorks Ltd. shall require tracked corrective actions, owners, deadlines, residual risk acceptance, and executive escalation for overdue blockers. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for remediation.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 24 | Area: Remediation | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

25. Business Continuity

For Data Processing Addendum, Apex DataWorks Ltd. shall require continuity plan, disaster recovery plan, tabletop test, restoration evidence, manual workaround, and dependency mapping. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for business continuity.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 25 | Area: Business Continuity | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

26. Exit Management

For Data Processing Addendum, Apex DataWorks Ltd. shall require transition plan, data export, knowledge transfer, secrets rotation, subcontractor disengagement, and deletion certification. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for exit management.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 26 | Area: Exit Management | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

27. Termination Rights

For Data Processing Addendum, Apex DataWorks Ltd. shall allow termination for uncured breach, security failure, regulatory prohibition, chronic SLA failure, or unresolved approval blocker. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for termination rights.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 27 | Area: Termination Rights | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

28. Liability Allocation

For Data Processing Addendum, Apex DataWorks Ltd. shall separate ordinary commercial liability from confidentiality, data protection, security, fraud, wilful misconduct, and IP claims. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for liability allocation.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 28 | Area: Liability Allocation | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

29. Insurance

For Data Processing Addendum, Apex DataWorks Ltd. shall require technology E&O, cyber, crime, professional liability, transit/warehouse coverage where relevant, and evidence of renewal. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for insurance.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 29 | Area: Insurance | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

30. Confidentiality

For Data Processing Addendum, Apex DataWorks Ltd. shall cover business, technical, pricing, architecture, security, data, model, and investigation information with survival terms. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for confidentiality.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 30 | Area: Confidentiality | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

31. Intellectual Property

For Data Processing Addendum, Apex DataWorks Ltd. shall separate background IP, deliverables, configurations, customer data, trained artifacts, documentation, and feedback. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for intellectual property.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 31 | Area: Intellectual Property | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

32. Open Source And Third-Party Components

For Data Processing Addendum, Apex DataWorks Ltd. shall require inventory, license compliance, vulnerability management, provenance, and replacement rights. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for open source and third-party components.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 32 | Area: Open Source And Third-Party Components | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

33. Publicity Restrictions

For Data Processing Addendum, Apex DataWorks Ltd. shall prohibit public use of customer name, data, logo, case study, benchmark, or regulator discussion without written approval. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for publicity restrictions.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 33 | Area: Publicity Restrictions | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

34. Dispute Escalation

For Data Processing Addendum, Apex DataWorks Ltd. shall require operational escalation, executive escalation, interim performance, evidence preservation, and venue selection. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for dispute escalation.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 34 | Area: Dispute Escalation | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

35. Regulator Cooperation

For Data Processing Addendum, Apex DataWorks Ltd. shall require assistance for supervisory authority inquiries, audits, information requests, breach notifications, and remediation evidence. The obligation applies to HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and to all records concerning processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for regulator cooperation.
- Approval blocker: unresolved gaps affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process must remain visible in the risk register until accepted by Customer.

Clause 35 | Area: Regulator Cooperation | Customer: Riverstone Operations Group | Provider: Apex DataWorks Ltd. | Evidence cadence: onboarding and annual refresh

Schedule B - Security, Privacy, Operational, And Supply-Chain Control Matrix

The following controls are written as test evidence for an enterprise compliance agent. Each row should be parsed as a possible obligation, blocker, owner action, or evidence requirement for Data Processing Addendum.

CTRL-01 Identity And Access

The parties assign identity and access as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering named accounts, MFA, least privilege, joiner-mover-leaver workflow, and quarterly recertification.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-01 | Control: Identity And Access | Evidence: named accounts, MFA, least privilege, joiner-mover-leaver workflow, and quarterly recertification | Blocker if missing: yes for high-risk or regulated processing

CTRL-02 Privileged Access

The parties assign privileged access as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering ticketed elevation, time limits, session recording, command logging, approval evidence, and emergency break-glass review.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.

- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-02 | Control: Privileged Access | Evidence: ticketed elevation, time limits, session recording, command logging, approval evidence, and emergency break-glass review | Blocker if missing: yes for high-risk or regulated processing

CTRL-03 Authentication

The parties assign authentication as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering SSO, certificate or key rotation, conditional access, device posture, and credential vaulting.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-03 | Control: Authentication | Evidence: SSO, certificate or key rotation, conditional access, device posture, and credential vaulting | Blocker if missing: yes for high-risk or regulated processing

CTRL-04 Authorization

The parties assign authorization as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering role definitions, segregation of duties, service account ownership, API scope limits, and customer revocation rights.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-04 | Control: Authorization | Evidence: role definitions, segregation of duties, service account ownership, API scope limits, and customer revocation rights | Blocker if missing: yes for high-risk or regulated processing

CTRL-05 Encryption

The parties assign encryption as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering TLS for transit, encryption at rest, key ownership, key rotation, and secure backup encryption.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-05 | Control: Encryption | Evidence: TLS for transit, encryption at rest, key ownership, key rotation, and secure backup encryption | Blocker if missing: yes for high-risk or regulated processing

CTRL-06 Logging

The parties assign logging as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering admin activity, API calls, data exports, model calls, configuration changes, and failed access attempts.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.

- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-06 | Control: Logging | Evidence: admin activity, API calls, data exports, model calls, configuration changes, and failed access attempts | Blocker if missing: yes for high-risk or regulated processing

CTRL-07 Monitoring

The parties assign monitoring as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering alert thresholds, SIEM export, anomaly detection, health checks, and operational dashboards.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-07 | Control: Monitoring | Evidence: alert thresholds, SIEM export, anomaly detection, health checks, and operational dashboards | Blocker if missing: yes for high-risk or regulated processing

CTRL-08 Vulnerability Management

The parties assign vulnerability management as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering scanning, severity rules, patch timelines, exception approval, and retest evidence.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-08 | Control: Vulnerability Management | Evidence: scanning, severity rules, patch timelines, exception approval, and retest evidence | Blocker if missing: yes for high-risk or regulated processing

CTRL-09 Secure Development

The parties assign secure development as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering secure SDLC, code review, dependency scanning, branch protection, secrets scanning, and release approval.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-09 | Control: Secure Development | Evidence: secure SDLC, code review, dependency scanning, branch protection, secrets scanning, release approval | Blocker if missing: yes for high-risk or regulated processing

CTRL-10 Penetration Testing

The parties assign penetration testing as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering annual testing, scope approval, remediation evidence, executive summary, and retest letter.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.

- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-10 | Control: Penetration Testing | Evidence: annual testing, scope approval, remediation evidence, executive summary, and retest letter | Blocker if missing: yes for high-risk or regulated processing

CTRL-11 Network Security

The parties assign network security as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering segmentation, private connectivity where available, firewall rules, allowlists, and egress control.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-11 | Control: Network Security | Evidence: segmentation, private connectivity where available, firewall rules, allowlists, and egress control | Blocker if missing: yes for high-risk or regulated processing

CTRL-12 Endpoint Security

The parties assign endpoint security as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering managed devices, EDR, disk encryption, patching, removable media restrictions, and lost-device handling.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-12 | Control: Endpoint Security | Evidence: managed devices, EDR, disk encryption, patching, removable media restrictions, and lost device handling | Blocker if missing: yes for high-risk or regulated processing

CTRL-13 Cloud Configuration

The parties assign cloud configuration as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering baseline hardening, configuration drift, infrastructure-as-code review, and tenant isolation verification.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-13 | Control: Cloud Configuration | Evidence: baseline hardening, configuration drift, infrastructure-as-code review, and tenant isolation verification | Blocker if missing: yes for high-risk or regulated processing

CTRL-14 Data Classification

The parties assign data classification as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering classification labels, handling rules, field mapping, retention rules, and data owner signoff.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.

- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-14 | Control: Data Classification | Evidence: classification labels, handling rules, field mapping, retention rules, and data ownership signoff | Blocker if missing: yes for high-risk or regulated processing

CTRL-15 Data Minimization

The parties assign data minimization as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering purpose limitation, field reduction, sampling controls, masking, and prohibited-data scanning.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-15 | Control: Data Minimization | Evidence: purpose limitation, field reduction, sampling controls, masking, and prohibited-data scanning | Blocker if missing: yes for high-risk or regulated processing

CTRL-16 Data Retention

The parties assign data retention as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering retention schedule, legal hold, deletion queue, backup retirement, and deletion certificate.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-16 | Control: Data Retention | Evidence: retention schedule, legal hold, deletion queue, backup retirement, and deletion certificate | Blocker if missing: yes for high-risk or regulated processing

CTRL-17 Data Transfer

The parties assign data transfer as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering approved locations, transfer safeguards, encryption, access controls, and destination inventory.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-17 | Control: Data Transfer | Evidence: approved locations, transfer safeguards, encryption, access controls, and destination inventory | Blocker if missing: yes for high-risk or regulated processing

CTRL-18 Subprocessor Oversight

The parties assign subprocessor oversight as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering due diligence, flow-down terms, change notice, objection right, and annual review.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.

- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-18 | Control: Subprocessor Oversight | Evidence: due diligence, flow-down terms, change notice, objection right, and annual review
Blocker if missing: yes for high-risk or regulated processing

CTRL-19 Incident Response

The parties assign incident response as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering playbooks, severity taxonomy, containment, forensic preservation, and communication approval.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-19 | Control: Incident Response | Evidence: playbooks, severity taxonomy, containment, forensic preservation, and communication approval | Blocker if missing: yes for high-risk or regulated processing

CTRL-20 Continuity

The parties assign continuity as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering RTO/RPO, tabletop test, alternate processing, dependency mapping, and restoration evidence.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-20 | Control: Continuity | Evidence: RTO/RPO, tabletop test, alternate processing, dependency mapping, and restoration evidence
Blocker if missing: yes for high-risk or regulated processing

CTRL-21 Exit

The parties assign exit as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering export format, assistance period, knowledge transfer, data deletion, and transition governance.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-21 | Control: Exit | Evidence: export format, assistance period, knowledge transfer, data deletion, and transition governance |
Blocker if missing: yes for high-risk or regulated processing

CTRL-22 Audit Evidence

The parties assign audit evidence as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering control owner, evidence artifact, refresh cadence, reviewer, deficiency handling, and evidence ID.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.

- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-22 | Control: Audit Evidence | Evidence: control owner, evidence artifact, refresh cadence, reviewer, deficiency handling, and evidence ID | Blocker if missing: yes for high-risk or regulated processing

CTRL-23 Responsible AI

The parties assign responsible ai as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering intended use, prohibited use, human approval, testing, monitoring, and unsupported certainty controls.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-23 | Control: Responsible AI | Evidence: intended use, prohibited use, human approval, testing, monitoring, and unsupported certainty controls | Blocker if missing: yes for high-risk or regulated processing

CTRL-24 Model Data Use

The parties assign model data use as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering training opt-in, fine-tuning prohibition, prompt/output retention, service improvement controls, and deletion.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-24 | Control: Model Data Use | Evidence: training opt-in, fine-tuning prohibition, prompt/output retention, service improvement controls, and deletion | Blocker if missing: yes for high-risk or regulated processing

CTRL-25 Integration Governance

The parties assign integration governance as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering system owner, data owner, API scopes, field mapping, failure handling, and rollback.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-25 | Control: Integration Governance | Evidence: system owner, data owner, API scopes, field mapping, failure handling, and rollback | Blocker if missing: yes for high-risk or regulated processing

CTRL-26 Financial Controls

The parties assign financial controls as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering approval authority, segregation of duties, payment-change controls, reconciliation, and exception reporting.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.

- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-26 | Control: Financial Controls | Evidence: approval authority, segregation of duties, payment-change controls, reconciliation, exception reporting | Blocker if missing: yes for high-risk or regulated processing

CTRL-27 Supplier Risk

The parties assign supplier risk as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering criticality, dependency, concentration risk, ownership, subcontractor risk, and remediation tracking.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-27 | Control: Supplier Risk | Evidence: criticality, dependency, concentration risk, ownership, subcontractor risk, and remediation tracking | Blocker if missing: yes for high-risk or regulated processing

CTRL-28 Physical Security

The parties assign physical security as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering facility access, visitor logs, chain of custody, asset tracking, and environmental controls.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-28 | Control: Physical Security | Evidence: facility access, visitor logs, chain of custody, asset tracking, and environmental controls | Blocker if missing: yes for high-risk or regulated processing

CTRL-29 Export Controls

The parties assign export controls as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering classification, license analysis, sanctions screening, end-use, end-user, re-export, and transfer restrictions.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-29 | Control: Export Controls | Evidence: classification, license analysis, sanctions screening, end-use, end-user, re-export, and transfer restrictions | Blocker if missing: yes for high-risk or regulated processing

CTRL-30 Marketing Consent

The parties assign marketing consent as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering lawful basis, consent source, suppression, audience upload approval, data partner review, and deletion.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.

- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

CTRL-30 | Control: Marketing Consent | Evidence: lawful basis, consent source, suppression, audience upload approval, data partner review and deletion | Blocker if missing: yes for high-risk or regulated processing

Schedule C - Domain-Specific Requirements For Data Processing Addendum

These clauses are intentionally specific to Data Processing Addendum and should trigger specialized reasoning rather than generic vendor-risk handling.

DOM-01 Processing Instructions

The parties assign processing instructions as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering documented instructions, unlawful-instruction notice, purpose limitation, and instruction change logs.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

DOM-01 | Control: Processing Instructions | Evidence: documented instructions, unlawful-instruction notice, purpose limitation, and instruction change logs | Blocker if missing: yes for high-risk or regulated processing

DOM-02 Data Subject Rights

The parties assign data subject rights as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering locate, export, rectify, restrict, delete, and object support with response timelines.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

DOM-02 | Control: Data Subject Rights | Evidence: locate, export, rectify, restrict, delete, and object support with response timelines | Blocker if missing: yes for high-risk or regulated processing

DOM-03 Breach Assistance

The parties assign breach assistance as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering facts, categories, approximate data subjects, mitigation, regulator support, and communications approval.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

DOM-03 | Control: Breach Assistance | Evidence: facts, categories, approximate data subjects, mitigation, regulator support, and communications approval | Blocker if missing: yes for high-risk or regulated processing

DOM-04 Transfer Impact

The parties assign transfer impact as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering destination, access law assessment, supplementary measures, onward transfer, and reassessment cadence.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

DOM-04 | Control: Transfer Impact | Evidence: destination, access law assessment, supplementary measures, onward transfer, and reassessment cadence | Blocker if missing: yes for high-risk or regulated processing

DOM-05 Processor Return And Deletion

The parties assign processor return and deletion as a control family for controller-processor duties, transfer impact assessment, subprocessors, retention, deletion, breach support. Provider must operate the control for HR, CRM, support, supplier, marketing, and analytics processing under documented instructions and retain evidence covering active deletion, backup aging, certification, legal hold exceptions, and audit samples.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, the control is treated as not operating for approval purposes.

DOM-05 | Control: Processor Return And Deletion | Evidence: active deletion, backup aging, certification, legal hold exceptions, and audit samples | Blocker if missing: yes for high-risk or regulated processing

Schedule D - Operational Runbook And Scenario Tests

Provider shall maintain a runbook for normal operations, failed operations, emergency operations, and exit operations involving processing instructions, subprocessor chain, transfer safeguards, deletion records, and data subject request queues.

D.1 Scenario - New Production Launch

If a new production launch occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-01 | Trigger: new production launch | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.2 Scenario - Material Subprocessor Change

If a material subprocessor change occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-02 | Trigger: material subprocessor change | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.3 Scenario - Privileged Support Request

If a privileged support request occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-03 | Trigger: privileged support request | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.4 Scenario - Suspected Data Leakage

If a suspected data leakage occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-04 | Trigger: suspected data leakage | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.5 Scenario - Regional Outage

If a regional outage occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-05 | Trigger: regional outage | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.6 Scenario - Billing Dispute

If a billing dispute occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-06 | Trigger: billing dispute | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.7 Scenario - Regulatory Inquiry

If a regulatory inquiry occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-07 | Trigger: regulatory inquiry | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.8 Scenario - Failed Access Review

If a failed access review occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-08 | Trigger: failed access review | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.9 Scenario - Expired Assurance Report

If a expired assurance report occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-09 | Trigger: expired assurance report | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.10 Scenario - Unapproved Integration

If a unapproved integration occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-10 | Trigger: unapproved integration | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.11 Scenario - Customer Exit

If a customer exit occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-11 | Trigger: customer exit | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.12 Scenario - Security Incident

If a security incident occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-12 | Trigger: security incident | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.13 Scenario - Privacy Incident

If a privacy incident occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-13 | Trigger: privacy incident | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.14 Scenario - Change Rollback

If a change rollback occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-14 | Trigger: change rollback | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.15 Scenario - Evidence Challenge

If a evidence challenge occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-15 | Trigger: evidence challenge | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.16 Scenario - Policy Exception

If a policy exception occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-16 | Trigger: policy exception | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.17 Scenario - Critical Vulnerability

If a critical vulnerability occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-17 | Trigger: critical vulnerability | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.18 Scenario - Unsupported Component

If a unsupported component occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-18 | Trigger: unsupported component | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.19 Scenario - Operator Departure

If a operator departure occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-19 | Trigger: operator departure | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.20 Scenario - Service Level Breach

If a service-level breach occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-20 | Trigger: service-level breach | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.21 Scenario - Data Deletion Request

If a data deletion request occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-21 | Trigger: data deletion request | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.22 Scenario - Audit Sample Failure

If a audit sample failure occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-22 | Trigger: audit sample failure | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.23 Scenario - Dependency Concentration Issue

If a dependency concentration issue occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-23 | Trigger: dependency concentration issue | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.24 Scenario - Cross Border Transfer Review

If a cross-border transfer review occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-24 | Trigger: cross-border transfer review | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.25 Scenario - Third Party Destination Review

If a third-party destination review occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to employee records, CRM notes, campaign events, supplier questionnaires, support narratives, and analytics metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process.

SCN-25 | Trigger: third-party destination review | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

Schedule F - Evidence Acceptance Matrix

EVID-001 | Artifact: contract approval | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-001A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-001B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-002 | Artifact: risk assessment | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-002A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-002B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-003 | Artifact: data map | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-003A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-003B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-004 | Artifact: system architecture | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-004A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-004B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-005 | Artifact: integration inventory | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-005A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-005B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-006 | Artifact: security assurance | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-006A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-006B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-007 | Artifact: access approval | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-007A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-007B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-008 | Artifact: privileged access review | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-008A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-008B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-009 | Artifact: change record | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-009A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-009B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-010 | Artifact: incident playbook | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-010A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-010B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-011 | Artifact: continuity test | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-011A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-011B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-012 | Artifact: exit plan | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-012A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-012B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-013 | Artifact: subcontractor review | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-013A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-013B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-014 | Artifact: retention schedule | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-014A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-014B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-015 | Artifact: deletion certificate | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-015A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-015B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-016 | Artifact: service level report | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-016A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-016B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-017 | Artifact: availability report | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-017A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-017B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-018 | Artifact: support ticket sample | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-018A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-018B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-019 | Artifact: audit log export | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-019A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-019B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-020 | Artifact: training record | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-020A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-020B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-021 | Artifact: policy exception | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-021A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-021B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-022 | Artifact: threat model | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-022A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-022B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-023 | Artifact: vulnerability report | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-023A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-023B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-024 | Artifact: penetration test summary | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-024A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-024B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-025 | Artifact: remediation plan | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-025A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-025B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-026 | Artifact: business owner signoff | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-026A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-026B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-027 | Artifact: legal approval | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-027A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-027B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-028 | Artifact: privacy approval | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-028A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-028B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-029 | Artifact: security approval | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-029A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-029B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-030 | Artifact: finance approval | Applies to: Data Processing Addendum | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-030A | Acceptance rule: artifact must address processing instructions, subprocessor chain, transfer safeguards, deletion records, data subject request queues and must not contradict the stated scope for HR, CRM, support, supplier, marketing, and analytics processes under documented instructions.

EVID-030B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

Schedule G - Known Gaps And Approval Conditions

As of the synthetic effective date, the following items are intentionally incomplete to test blocker detection: final transfer impact assessment, subprocessor objection workflow, retention table, deletion certificate process. No production approval may be inferred from partial evidence.

G.1 Open Item - Final Transfer Impact Assessment

The open item 'final transfer impact assessment' remains a blocking or conditional approval factor until a named owner supplies final evidence, legal and security review are complete, and the residual risk decision is recorded.

- Agent expectation: classify the gap, map the affected domain, state the missing artifact, and recommend the next owner action.

G.2 Open Item - Subprocessor Objection Workflow

The open item 'subprocessor objection workflow' remains a blocking or conditional approval factor until a named owner supplies final evidence, legal and security review are complete, and the residual risk decision is recorded.

- Agent expectation: classify the gap, map the affected domain, state the missing artifact, and recommend the next owner action.

G.3 Open Item - Retention Table

The open item 'retention table' remains a blocking or conditional approval factor until a named owner supplies final evidence, legal and security review are complete, and the residual risk decision is recorded.

- Agent expectation: classify the gap, map the affected domain, state the missing artifact, and recommend the next owner action.

G.4 Open Item - Deletion Certificate Process

The open item 'deletion certificate process' remains a blocking or conditional approval factor until a named owner supplies final evidence, legal and security review are complete, and the residual risk decision is recorded.

- Agent expectation: classify the gap, map the affected domain, state the missing artifact, and recommend the next owner action.
