

Managed Platform Integration Services Agreement

OmniBridge Services LLC implementation and managed operations across ERP, HRIS, CRM, ITSM, collaboration, and data platforms

Synthetic legal-style test document for agent evaluation. Not legal advice. No real parties.

Services

OmniBridge Services LLC will design, implement, and operate integrations across Oracle ERP, SAP S/4HANA, Workday, ServiceNow, Salesforce, Microsoft 365, SharePoint, Power BI, Snowflake, Databricks, Jira, Okta, and customer-managed SFTP gateways.

The provider will build API connectors, data mappings, workflow automations, reconciliation reports, exception queues, and support dashboards. Some integrations will move regulated data between finance, HR, procurement, customer support, and compliance systems.

Data Categories

- Finance: invoice metadata, payment approval status, supplier bank change requests, purchase orders, budget codes, ledger extracts, tax records, and audit evidence.
- HR: employee identifiers, work email, manager, department, job title, location, onboarding status, and access request history.
- Customer operations: CRM notes, support case narratives, account identifiers, service entitlements, project milestones, and renewal data.
- Technical data: API tokens, integration logs, webhook payloads, IP addresses, device identifiers, error traces, and privileged session metadata.

Access Model

Provider requests temporary administrator access to ERP, ServiceNow, SharePoint, and integration middleware during implementation. Customer has not yet provided final privileged access approval, named account mapping, or production change-control signoff.

- All provider access must be named user access. Shared accounts, unmanaged API keys, and standing admin rights are prohibited unless separately approved as an exception.
- Provider shall use customer-approved bastion or PAM tooling, time-bound elevation, ticket references, session recording, and monthly access review.

Deliverables

- Integration inventory with system owner, data owner, source, target, data categories, transfer frequency, encryption method, and failure handling.
- Data mapping workbook showing field-level classification, transformation rules, retention needs, and exception routing.
- Runbook for monitoring, incident response, rollback, replay, data correction, and integration shutdown.
- Control evidence pack including access approvals, architecture diagrams, test results, dependency list, continuity plan, and exit procedure.

Regulatory And Control Requirements

Provider shall preserve segregation of duties in finance workflows, prevent unsupported payment authority changes, and route high-risk exceptions to customer finance control owners. Provider shall not approve its own changes or bypass customer release management.

Provider shall not copy production data into development or offshore support environments without masking, approval, and data owner signoff.

Security Controls

- Provider shall maintain ISO 27001 or SOC 2 Type II controls, annual penetration testing, vulnerability remediation tracking, endpoint hardening, and centralized logging.
- Provider shall enforce least privilege, MFA, named accounts, privileged access review, break-glass controls, and quarterly access recertification.
- Provider shall encrypt data in transit using TLS 1.2 or higher and encrypt data at rest using a recognized key management service.
- Provider shall notify Customer of confirmed security incidents without undue delay and no later than 48 hours after confirmation.

Audit, Evidence, And Records

- Provider shall preserve audit logs, integration logs, access approvals, configuration changes, incident tickets, and data export records for at least 18 months.
- Customer may request security attestations, remediation summaries, subprocessor lists, continuity evidence, and access reports during onboarding and annual review.

Continuity And Exit

Provider shall support customer continuity planning by documenting failover, manual processing workarounds, data replay, queue draining, and integration disablement. Exit assistance must include connector source code handover, secrets rotation support, and knowledge transfer.

Open Items

- Privileged access approval is not complete.
- Final data processing addendum is pending legal execution.
- Business continuity test evidence has not been supplied.

Reference Basis For Synthetic Fixture

This fixture is original synthetic text. It uses public legal, regulatory, security, cloud, export-control, and AI governance sources only as structural reference points. It is not legal advice and is not a copy of any source template.

Schedule A - Commercial And Governance Terms

This schedule converts the business request into a production-ready contract package for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms. The parties acknowledge the primary regulated focus as segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit.

1. Definitions And Interpretation

For Managed Platform Integration Services, OmniBridge Services LLC shall define controlled terms, service boundary, covered affiliates, data classes, evidence artifacts, and approval gates. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for definitions and interpretation.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 01 | Area: Definitions And Interpretation | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

2. Order Of Precedence

For Managed Platform Integration Services, OmniBridge Services LLC shall resolve conflicts between the order form, schedules, security annex, DPA, support policies, and statements of work. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for order of precedence.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 02 | Area: Order Of Precedence | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

3. Statement Of Work Controls

For Managed Platform Integration Services, OmniBridge Services LLC shall require every work package to identify scope, owners, data, systems, locations, subcontractors, acceptance tests, and blockers. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for statement of work controls.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 03 | Area: Statement Of Work Controls | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

4. Governance Board

For Managed Platform Integration Services, OmniBridge Services LLC shall establish operational, legal, security, privacy, finance, and compliance reviewers with documented decision rights. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for governance board.

- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 04 | Area: Governance Board | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

5. Onboarding Gate

For Managed Platform Integration Services, OmniBridge Services LLC shall block production use until risk classification, architecture review, data owner approval, security review, and contract signoff are complete. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for onboarding gate.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 05 | Area: Onboarding Gate | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

6. Service Description

For Managed Platform Integration Services, OmniBridge Services LLC shall state what the provider may do, what it may not do, and which activities need a separate change order. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for service description.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 06 | Area: Service Description | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

7. Customer Responsibilities

For Managed Platform Integration Services, OmniBridge Services LLC shall identify required approvals, access provisioning, data-quality responsibilities, and evidence response timelines. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for customer responsibilities.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 07 | Area: Customer Responsibilities | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

8. Provider Responsibilities

For Managed Platform Integration Services, OmniBridge Services LLC shall require professional care, trained personnel, documented controls, subcontractor oversight, and audit cooperation. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for provider responsibilities.

- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 08 | Area: Provider Responsibilities | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

9. Regulatory Change

For Managed Platform Integration Services, OmniBridge Services LLC shall require impact assessment, control updates, pricing discussion, and implementation plan when law or regulator guidance changes. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for regulatory change.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 09 | Area: Regulatory Change | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

10. Policies And Standards

For Managed Platform Integration Services, OmniBridge Services LLC shall bind the provider to security, privacy, AI, procurement, continuity, records, and acceptable-use policies supplied by customer. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for policies and standards.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 10 | Area: Policies And Standards | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

11. Personnel And Background Screening

For Managed Platform Integration Services, OmniBridge Services LLC shall require appropriate screening, role-based training, confidentiality obligations, and access removal at exit. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for personnel and background screening.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 11 | Area: Personnel And Background Screening | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

12. Conflicts Of Interest

For Managed Platform Integration Services, OmniBridge Services LLC shall require disclosure of conflicting customers, incentives, related-party arrangements, and independence impairments. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for conflicts of interest.

- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 12 | Area: Conflicts Of Interest | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

13. Subcontracting

For Managed Platform Integration Services, OmniBridge Services LLC shall require approval for material subcontractors, flow-down clauses, evidence rights, and termination support. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for subcontracting.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 13 | Area: Subcontracting | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

14. Change Control

For Managed Platform Integration Services, OmniBridge Services LLC shall require risk assessment before changing scope, location, subprocessors, integrations, data classes, AI use, or access model. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for change control.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 14 | Area: Change Control | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

15. Fees And Invoicing Controls

For Managed Platform Integration Services, OmniBridge Services LLC shall align billing events to accepted deliverables, usage reports, rate cards, credits, and disputed invoice procedures. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for fees and invoicing controls.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 15 | Area: Fees And Invoicing Controls | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

16. Service Levels

For Managed Platform Integration Services, OmniBridge Services LLC shall define uptime, response, restoration, data delivery, support, reporting, and incident communication measures. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for service levels.

- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 16 | Area: Service Levels | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

17. Service Credits

For Managed Platform Integration Services, OmniBridge Services LLC shall state credits do not replace corrective actions, regulatory duties, or termination rights for chronic failure. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for service credits.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 17 | Area: Service Credits | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

18. Acceptance Testing

For Managed Platform Integration Services, OmniBridge Services LLC shall require functional, security, privacy, continuity, integration, and reporting tests before production acceptance. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for acceptance testing.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 18 | Area: Acceptance Testing | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

19. Documentation

For Managed Platform Integration Services, OmniBridge Services LLC shall require architecture diagrams, runbooks, integration inventory, data maps, control matrix, and evidence pack maintenance. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for documentation.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 19 | Area: Documentation | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

20. Records Retention

For Managed Platform Integration Services, OmniBridge Services LLC shall preserve approvals, logs, exports, support records, change records, audit evidence, and decision files for defined periods. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for records retention.

- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 20 | Area: Records Retention | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

21. Audit Rights

For Managed Platform Integration Services, OmniBridge Services LLC shall permit questionnaire, evidence review, independent assurance report, interview, remediation tracking, and targeted audit. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for audit rights.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 21 | Area: Audit Rights | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

22. Incident Management

For Managed Platform Integration Services, OmniBridge Services LLC shall define security, privacy, continuity, physical, export, payment, and data-quality incidents with severity levels. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for incident management.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 22 | Area: Incident Management | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

23. Notification

For Managed Platform Integration Services, OmniBridge Services LLC shall require prompt notices, factual updates, root cause, containment, legal hold, communications approval, and corrective plan. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for notification.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 23 | Area: Notification | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

24. Remediation

For Managed Platform Integration Services, OmniBridge Services LLC shall require tracked corrective actions, owners, deadlines, residual risk acceptance, and executive escalation for overdue blockers. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for remediation.

- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 24 | Area: Remediation | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

25. Business Continuity

For Managed Platform Integration Services, OmniBridge Services LLC shall require continuity plan, disaster recovery plan, tabletop test, restoration evidence, manual workaround, and dependency mapping. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for business continuity.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 25 | Area: Business Continuity | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

26. Exit Management

For Managed Platform Integration Services, OmniBridge Services LLC shall require transition plan, data export, knowledge transfer, secrets rotation, subcontractor disengagement, and deletion certification. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for exit management.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 26 | Area: Exit Management | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

27. Termination Rights

For Managed Platform Integration Services, OmniBridge Services LLC shall allow termination for uncured breach, security failure, regulatory prohibition, chronic SLA failure, or unresolved approval blocker. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for termination rights.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 27 | Area: Termination Rights | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

28. Liability Allocation

For Managed Platform Integration Services, OmniBridge Services LLC shall separate ordinary commercial liability from confidentiality, data protection, security, fraud, wilful misconduct, and IP claims. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for liability allocation.

- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 28 | Area: Liability Allocation | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

29. Insurance

For Managed Platform Integration Services, OmniBridge Services LLC shall require technology E&O, cyber, crime, professional liability, transit/warehouse coverage where relevant, and evidence of renewal. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for insurance.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 29 | Area: Insurance | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

30. Confidentiality

For Managed Platform Integration Services, OmniBridge Services LLC shall cover business, technical, pricing, architecture, security, data, model, and investigation information with survival terms. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for confidentiality.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 30 | Area: Confidentiality | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

31. Intellectual Property

For Managed Platform Integration Services, OmniBridge Services LLC shall separate background IP, deliverables, configurations, customer data, trained artifacts, documentation, and feedback. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for intellectual property.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 31 | Area: Intellectual Property | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

32. Open Source And Third-Party Components

For Managed Platform Integration Services, OmniBridge Services LLC shall require inventory, license compliance, vulnerability management, provenance, and replacement rights. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for open source and third-party components.

- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 32 | Area: Open Source And Third-Party Components | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

33. Publicity Restrictions

For Managed Platform Integration Services, OmniBridge Services LLC shall prohibit public use of customer name, data, logo, case study, benchmark, or regulator discussion without written approval. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for publicity restrictions.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 33 | Area: Publicity Restrictions | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

34. Dispute Escalation

For Managed Platform Integration Services, OmniBridge Services LLC shall require operational escalation, executive escalation, interim performance, evidence preservation, and venue selection. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for dispute escalation.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 34 | Area: Dispute Escalation | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

35. Regulator Cooperation

For Managed Platform Integration Services, OmniBridge Services LLC shall require assistance for supervisory authority inquiries, audits, information requests, breach notifications, and remediation evidence. The obligation applies to managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and to all records concerning integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

- Required evidence: owner, approval date, artifact ID, renewal date, exception status, and reviewer for regulator cooperation.
- Approval blocker: unresolved gaps affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan must remain visible in the risk register until accepted by Customer.

Clause 35 | Area: Regulator Cooperation | Customer: Summit Core Enterprises | Provider: OmniBridge Services LLC | Evidence cadence: onboarding and annual refresh

Schedule B - Security, Privacy, Operational, And Supply-Chain Control Matrix

The following controls are written as test evidence for an enterprise compliance agent. Each row should be parsed as a possible obligation, blocker, owner action, or evidence requirement for Managed Platform Integration Services.

CTRL-01 Identity And Access

The parties assign identity and access as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering named accounts, MFA, least privilege, joiner-mover-leaver workflow, and quarterly recertification.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-01 | Control: Identity And Access | Evidence: named accounts, MFA, least privilege, joiner-mover-leaver workflow, and quarterly recertification | Blocker if missing: yes for high-risk or regulated processing

CTRL-02 Privileged Access

The parties assign privileged access as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering ticketed elevation, time limits, session recording, command logging, approval evidence, and emergency break-glass review.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-02 | Control: Privileged Access | Evidence: ticketed elevation, time limits, session recording, command logging, approval evidence, and emergency break-glass review | Blocker if missing: yes for high-risk or regulated processing

CTRL-03 Authentication

The parties assign authentication as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering SSO, certificate or key rotation, conditional access, device posture, and credential vaulting.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-03 | Control: Authentication | Evidence: SSO, certificate or key rotation, conditional access, device posture, and credential vaulting | Blocker if missing: yes for high-risk or regulated processing

CTRL-04 Authorization

The parties assign authorization as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering role definitions, segregation of duties, service account ownership, API scope limits, and customer revocation rights.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-04 | Control: Authorization | Evidence: role definitions, segregation of duties, service account ownership, API scope limits, and customer revocation rights | Blocker if missing: yes for high-risk or regulated processing

CTRL-05 Encryption

The parties assign encryption as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering TLS for transit, encryption at rest, key ownership, key rotation, and secure backup encryption.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-05 | Control: Encryption | Evidence: TLS for transit, encryption at rest, key ownership, key rotation, and secure backup encryption | Blocker if missing: yes for high-risk or regulated processing

CTRL-06 Logging

The parties assign logging as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering admin activity, API calls, data exports, model calls, configuration changes, and failed access attempts.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-06 | Control: Logging | Evidence: admin activity, API calls, data exports, model calls, configuration changes, and failed access attempts | Blocker if missing: yes for high-risk or regulated processing

CTRL-07 Monitoring

The parties assign monitoring as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering alert thresholds, SIEM export, anomaly detection, health checks, and operational dashboards.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-07 | Control: Monitoring | Evidence: alert thresholds, SIEM export, anomaly detection, health checks, and operational dashboards | Blocker if missing: yes for high-risk or regulated processing

CTRL-08 Vulnerability Management

The parties assign vulnerability management as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering scanning, severity rules, patch timelines, exception approval, and retest evidence.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-08 | Control: Vulnerability Management | Evidence: scanning, severity rules, patch timelines, exception approval, and retest evidence | Blocker if missing: yes for high-risk or regulated processing

CTRL-09 Secure Development

The parties assign secure development as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering secure SDLC, code review, dependency scanning, branch protection, secrets scanning, and release approval.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-09 | Control: Secure Development | Evidence: secure SDLC, code review, dependency scanning, branch protection, secrets scanning, release approval | Blocker if missing: yes for high-risk or regulated processing

CTRL-10 Penetration Testing

The parties assign penetration testing as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering annual testing, scope approval, remediation evidence, executive summary, and retest letter.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-10 | Control: Penetration Testing | Evidence: annual testing, scope approval, remediation evidence, executive summary, and retest letter | Blocker if missing: yes for high-risk or regulated processing

CTRL-11 Network Security

The parties assign network security as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering segmentation, private connectivity where available, firewall rules, allowlists, and egress control.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-11 | Control: Network Security | Evidence: segmentation, private connectivity where available, firewall rules, allowlists, and egress control | Blocker if missing: yes for high-risk or regulated processing

CTRL-12 Endpoint Security

The parties assign endpoint security as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering managed devices, EDR, disk encryption, patching, removable media restrictions, and lost-device handling.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-12 | Control: Endpoint Security | Evidence: managed devices, EDR, disk encryption, patching, removable media restrictions, and lost device handling | Blocker if missing: yes for high-risk or regulated processing

CTRL-13 Cloud Configuration

The parties assign cloud configuration as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering baseline hardening, configuration drift, infrastructure-as-code review, and tenant isolation verification.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-13 | Control: Cloud Configuration | Evidence: baseline hardening, configuration drift, infrastructure-as-code review, and tenant isolation verification | Blocker if missing: yes for high-risk or regulated processing

CTRL-14 Data Classification

The parties assign data classification as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering classification labels, handling rules, field mapping, retention rules, and data owner signoff.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-14 | Control: Data Classification | Evidence: classification labels, handling rules, field mapping, retention rules, and data owner signoff | Blocker if missing: yes for high-risk or regulated processing

CTRL-15 Data Minimization

The parties assign data minimization as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering purpose limitation, field reduction, sampling controls, masking, and prohibited-data scanning.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-15 | Control: Data Minimization | Evidence: purpose limitation, field reduction, sampling controls, masking, and prohibited-data scanning | Blocker if missing: yes for high-risk or regulated processing

CTRL-16 Data Retention

The parties assign data retention as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering retention schedule, legal hold, deletion queue, backup retirement, and deletion certificate.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-16 | Control: Data Retention | Evidence: retention schedule, legal hold, deletion queue, backup retirement, and deletion certificate | Blocker if missing: yes for high-risk or regulated processing

CTRL-17 Data Transfer

The parties assign data transfer as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering approved locations, transfer safeguards, encryption, access controls, and destination inventory.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-17 | Control: Data Transfer | Evidence: approved locations, transfer safeguards, encryption, access controls, and destination inventory | Blocker if missing: yes for high-risk or regulated processing

CTRL-18 Subprocessor Oversight

The parties assign subprocessor oversight as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering due diligence, flow-down terms, change notice, objection right, and annual review.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-18 | Control: Subprocessor Oversight | Evidence: due diligence, flow-down terms, change notice, objection right, and annual review | Blocker if missing: yes for high-risk or regulated processing

CTRL-19 Incident Response

The parties assign incident response as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering playbooks, severity taxonomy, containment, forensic preservation, and communication approval.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-19 | Control: Incident Response | Evidence: playbooks, severity taxonomy, containment, forensic preservation, and communication approval | Blocker if missing: yes for high-risk or regulated processing

CTRL-20 Continuity

The parties assign continuity as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering RTO/RPO, tabletop test, alternate processing, dependency mapping, and restoration evidence.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-20 | Control: Continuity | Evidence: RTO/RPO, tabletop test, alternate processing, dependency mapping, and restoration evidence | Blocker if missing: yes for high-risk or regulated processing

CTRL-21 Exit

The parties assign exit as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering export format, assistance period, knowledge transfer, data deletion, and transition governance.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-21 | Control: Exit | Evidence: export format, assistance period, knowledge transfer, data deletion, and transition governance | Blocker if missing: yes for high-risk or regulated processing

CTRL-22 Audit Evidence

The parties assign audit evidence as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering control owner, evidence artifact, refresh cadence, reviewer, deficiency handling, and evidence ID.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-22 | Control: Audit Evidence | Evidence: control owner, evidence artifact, refresh cadence, reviewer, deficiency handling, and evidence ID | Blocker if missing: yes for high-risk or regulated processing

CTRL-23 Responsible AI

The parties assign responsible ai as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering intended use, prohibited use, human approval, testing, monitoring, and unsupported certainty controls.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-23 | Control: Responsible AI | Evidence: intended use, prohibited use, human approval, testing, monitoring, and unsupported certainty controls | Blocker if missing: yes for high-risk or regulated processing

CTRL-24 Model Data Use

The parties assign model data use as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering training opt-in, fine-tuning prohibition, prompt/output retention, service improvement controls, and deletion.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-24 | Control: Model Data Use | Evidence: training opt-in, fine-tuning prohibition, prompt/output retention, service improvement controls, and deletion | Blocker if missing: yes for high-risk or regulated processing

CTRL-25 Integration Governance

The parties assign integration governance as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering system owner, data owner, API scopes, field mapping, failure handling, and rollback.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-25 | Control: Integration Governance | Evidence: system owner, data owner, API scopes, field mapping, failure handling, and rollback | Blocker if missing: yes for high-risk or regulated processing

CTRL-26 Financial Controls

The parties assign financial controls as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering approval authority, segregation of duties, payment-change controls, reconciliation, and exception reporting.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-26 | Control: Financial Controls | Evidence: approval authority, segregation of duties, payment-change controls, reconciliation, exception reporting | Blocker if missing: yes for high-risk or regulated processing

CTRL-27 Supplier Risk

The parties assign supplier risk as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering criticality, dependency, concentration risk, ownership, subcontractor risk, and remediation tracking.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-27 | Control: Supplier Risk | Evidence: criticality, dependency, concentration risk, ownership, subcontractor risk, and remediation tracking | Blocker if missing: yes for high-risk or regulated processing

CTRL-28 Physical Security

The parties assign physical security as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering facility access, visitor logs, chain of custody, asset tracking, and environmental controls.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-28 | Control: Physical Security | Evidence: facility access, visitor logs, chain of custody, asset tracking, and environmental controls | Blocker if missing: yes for high-risk or regulated processing

CTRL-29 Export Controls

The parties assign export controls as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering classification, license analysis, sanctions screening, end-use, end-user, re-export, and transfer restrictions.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-29 | Control: Export Controls | Evidence: classification, license analysis, sanctions screening, end-use, end-user, re-export, and transfer restrictions | Blocker if missing: yes for high-risk or regulated processing

CTRL-30 Marketing Consent

The parties assign marketing consent as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering lawful basis, consent source, suppression, audience upload approval, data partner review, and deletion.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

CTRL-30 | Control: Marketing Consent | Evidence: lawful basis, consent source, suppression, audience upload approval, data partner review, and deletion | Blocker if missing: yes for high-risk or regulated processing

Schedule C - Domain-Specific Requirements For Managed Platform Integration Services

These clauses are intentionally specific to Managed Platform Integration Services and should trigger specialized reasoning rather than generic vendor-risk handling.

DOM-01 Integration Inventory

The parties assign integration inventory as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering source, target, owner, data class, transfer frequency, API scope, secrets owner, and failure handler.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

DOM-01 | Control: Integration Inventory | Evidence: source, target, owner, data class, transfer frequency, API scope, secrets owner, and failure handler | Blocker if missing: yes for high-risk or regulated processing

DOM-02 Segregation Of Duties

The parties assign segregation of duties as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering payment authority, release approval, change execution, monitoring, and exception ownership separation.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.

- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

DOM-02 | Control: Segregation Of Duties | Evidence: payment authority, release approval, change execution, monitoring, and exception ownership separation | Blocker if missing: yes for high-risk or regulated processing

DOM-03 Secrets Management

The parties assign secrets management as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering vaulting, rotation, emergency access, environment separation, and retirement at exit.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

DOM-03 | Control: Secrets Management | Evidence: vaulting, rotation, emergency access, environment separation, and retirement at exit | Blocker if missing: yes for high-risk or regulated processing

DOM-04 Data Mapping

The parties assign data mapping as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering field classification, transformation, masking, validation, replay handling, and reconciliation.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

DOM-04 | Control: Data Mapping | Evidence: field classification, transformation, masking, validation, replay handling, and reconciliation | Blocker if missing: yes for high-risk or regulated processing

DOM-05 Release Management

The parties assign release management as a control family for segregation of duties, privileged access, system integration risk, finance controls, data protection, continuity, exit. Provider must operate the control for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms and retain evidence covering change window, rollback, test results, approvals, stakeholder notice, and post-release monitoring.

- Testing procedure: sample the latest production configuration, one recent change, one access approval, one exception, and one renewal artifact.
- Failure mode: if evidence is stale, incomplete, or inconsistent with finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, the control is treated as not operating for approval purposes.

DOM-05 | Control: Release Management | Evidence: change window, rollback, test results, approvals, stakeholder notice, and post-release monitoring | Blocker if missing: yes for high-risk or regulated processing

Schedule D - Operational Runbook And Scenario Tests

Provider shall maintain a runbook for normal operations, failed operations, emergency operations, and exit operations involving integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines.

D.1 Scenario - New Production Launch

If a new production launch occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-01 | Trigger: new production launch | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.2 Scenario - Material Subprocessor Change

If a material subprocessor change occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-02 | Trigger: material subprocessor change | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.3 Scenario - Privileged Support Request

If a privileged support request occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-03 | Trigger: privileged support request | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.4 Scenario - Suspected Data Leakage

If a suspected data leakage occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-04 | Trigger: suspected data leakage | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.5 Scenario - Regional Outage

If a regional outage occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-05 | Trigger: regional outage | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.6 Scenario - Billing Dispute

If a billing dispute occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-06 | Trigger: billing dispute | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.7 Scenario - Regulatory Inquiry

If a regulatory inquiry occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-07 | Trigger: regulatory inquiry | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.8 Scenario - Failed Access Review

If a failed access review occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-08 | Trigger: failed access review | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.9 Scenario - Expired Assurance Report

If a expired assurance report occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-09 | Trigger: expired assurance report | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.10 Scenario - Unapproved Integration

If a unapproved integration occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-10 | Trigger: unapproved integration | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.11 Scenario - Customer Exit

If a customer exit occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-11 | Trigger: customer exit | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.12 Scenario - Security Incident

If a security incident occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-12 | Trigger: security incident | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.13 Scenario - Privacy Incident

If a privacy incident occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-13 | Trigger: privacy incident | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.14 Scenario - Change Rollback

If a change rollback occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-14 | Trigger: change rollback | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.15 Scenario - Evidence Challenge

If a evidence challenge occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-15 | Trigger: evidence challenge | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.16 Scenario - Policy Exception

If a policy exception occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-16 | Trigger: policy exception | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.17 Scenario - Critical Vulnerability

If a critical vulnerability occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-17 | Trigger: critical vulnerability | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.18 Scenario - Unsupported Component

If a unsupported component occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-18 | Trigger: unsupported component | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.19 Scenario - Operator Departure

If a operator departure occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-19 | Trigger: operator departure | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.20 Scenario - Service Level Breach

If a service-level breach occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-20 | Trigger: service-level breach | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.21 Scenario - Data Deletion Request

If a data deletion request occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-21 | Trigger: data deletion request | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.22 Scenario - Audit Sample Failure

If a audit sample failure occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-22 | Trigger: audit sample failure | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.23 Scenario - Dependency Concentration Issue

If a dependency concentration issue occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-23 | Trigger: dependency concentration issue | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.24 Scenario - Cross Border Transfer Review

If a cross-border transfer review occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-24 | Trigger: cross-border transfer review | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

D.25 Scenario - Third Party Destination Review

If a third-party destination review occurs, Provider shall open a tracked record, identify the affected service boundary, assess impact to finance approvals, supplier bank changes, HR attributes, CRM case narratives, API payloads, logs, and privileged session metadata, assign owner and deadline, and preserve evidence for audit review.

- Required decision output: continue, pause, remediate, escalate, or exit. The decision must reference current evidence and any gap affecting privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan.

SCN-25 | Trigger: third-party destination review | Evidence: ticket, owner, chronology, impact, control response, closure approval | Reviewer: customer control owner

Schedule F - Evidence Acceptance Matrix

EVID-001 | Artifact: contract approval | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system reviewer, finding status, renewal cadence

EVID-001A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, field mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-001B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-002 | Artifact: risk assessment | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-002A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-002B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-003 | Artifact: data map | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-003A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-003B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-004 | Artifact: system architecture | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-004A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-004B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-005 | Artifact: integration inventory | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-005A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-005B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-006 | Artifact: security assurance | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-006A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-006B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-007 | Artifact: access approval | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-007A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-007B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-008 | Artifact: privileged access review | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-008A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-008B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-009 | Artifact: change record | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-009A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-009B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-010 | Artifact: incident playbook | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-010A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-010B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-011 | Artifact: continuity test | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-011A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-011B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-012 | Artifact: exit plan | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-012A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-012B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-013 | Artifact: subcontractor review | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-013A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-013B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-014 | Artifact: retention schedule | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-014A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-014B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-015 | Artifact: deletion certificate | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-015A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-015B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-016 | Artifact: service level report | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-016A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-016B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-017 | Artifact: availability report | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-017A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-017B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-018 | Artifact: support ticket sample | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-018A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-018B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-019 | Artifact: audit log export | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-019A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-019B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-020 | Artifact: training record | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-020A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-020B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-021 | Artifact: policy exception | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-021A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-021B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-022 | Artifact: threat model | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-022A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-022B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-023 | Artifact: vulnerability report | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-023A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-023B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-024 | Artifact: penetration test summary | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-024A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-024B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-025 | Artifact: remediation plan | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-025A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-025B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-026 | Artifact: business owner signoff | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-026A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-026B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-027 | Artifact: legal approval | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-027A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-027B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-028 | Artifact: privacy approval | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-028A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-028B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-029 | Artifact: security approval | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system, reviewer, finding status, renewal cadence

EVID-029A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-029B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

EVID-030 | Artifact: finance approval | Applies to: Managed Platform Integration Services | Minimum fields: owner, date, source system reviewer, finding status, renewal cadence

EVID-030A | Acceptance rule: artifact must address integration middleware, secrets, ERP workflows, privileged accounts, runbooks, file mappings, and release pipelines and must not contradict the stated scope for managed integration across ERP, HRIS, CRM, ITSM, collaboration, warehouse, and reporting platforms.

EVID-030B | Blocking rule: if artifact is absent, expired, unsigned, or limited to a non-production environment, the approval status remains conditional.

Schedule G - Known Gaps And Approval Conditions

As of the synthetic effective date, the following items are intentionally incomplete to test blocker detection: privileged access approval, data processing addendum, continuity evidence, release-control signoff, secrets rotation plan. No production approval may be inferred from partial evidence.

G.1 Open Item - Privileged Access Approval

The open item 'privileged access approval' remains a blocking or conditional approval factor until a named owner supplies final evidence, legal and security review are complete, and the residual risk decision is recorded.

- Agent expectation: classify the gap, map the affected domain, state the missing artifact, and recommend the next owner action.

G.2 Open Item - Data Processing Addendum

The open item 'data processing addendum' remains a blocking or conditional approval factor until a named owner supplies final evidence, legal and security review are complete, and the residual risk decision is recorded.

- Agent expectation: classify the gap, map the affected domain, state the missing artifact, and recommend the next owner action.

G.3 Open Item - Continuity Evidence

The open item 'continuity evidence' remains a blocking or conditional approval factor until a named owner supplies final evidence, legal and security review are complete, and the residual risk decision is recorded.

- Agent expectation: classify the gap, map the affected domain, state the missing artifact, and recommend the next owner action.

G.4 Open Item - Release Control Signoff

The open item 'release-control signoff' remains a blocking or conditional approval factor until a named owner supplies final evidence, legal and security review are complete, and the residual risk decision is recorded.

- Agent expectation: classify the gap, map the affected domain, state the missing artifact, and recommend the next owner action.
